SAP Projects

Vehicle Manufacturing Optimization (Rollout Project)

3rd Party MES Integration

Direct Vehicle Sales Platform Integration

Warranty Management System Migration to SAP

1. **SAP Manufacturing Process Optimization** to re-map the SAP system, resulting in a more streamlined and efficient production flow.
2. **Comprehensive Manufacturing Strategy Enhancement** by fostering improved resource utilization and data-driven decision-making.

Achieving seamless 3rd party Manufacturing Execution System (MES) integration and plant-level inventory management was the core aim of this project, ensuring efficient inventory stock control across the client's manufacturing operations.

This project aimed to integrate a 3rd party vehicle sales portal with the client's existing platform. This strategic integration aimed to enable direct vehicle sales through the client's online portal, fostering a seamless customer experience.

This project aimed to modernize the client's warranty management system by migrating from a legacy Visual Basic application to SAP. The migration involved a comprehensive process of assessment, customization and data migration to seamlessly integrate warranty management within the SAP ecosystem.
